

Focus On Conveyors

Adjustable performance saves energy

Yale Materials Handling Incorporating application-matched functionality and operator comfort features, the ERC-VG electric rider lift truck generates internal combustion engine performance without emissions. Powered by battery technology, the truck cuts energy consumption with adjustable performance parameters, extended shift functionality and increased productivity. Industrial grade critical components used in the vehicle's construction increase overall productivity and life of a truck, 800-233-9253, www.yale.com.
